COSC 1336 – Programming Fundamentals I
Program 1 – Arithmetic Expressions

A particular employee earns $32,500 annually. Write a program that determines and displays what the amount of his gross pay will be for each pay period if he is paid twice a month (24 pay checks per year) and if he is paid bi-weekly (26 check per year).

Turn in the following:

1.   A hardcopy of your source code (Program1.py)

2.   A hardcopy of your output
